

## TED Connection: How we see color

### Overview

Mensa for Kids' TED Connections are short, easy to use guides that help teachers, parents and youth use TED talks in a classroom or home setting. Rather than a lesson plan format, they have a list of discussion questions, all at higher levels of thinking.

There are three types of color receptors in your eye: red, green and blue. But how do we see the kaleidoscope of other colors that make up our world? **Colm Kelleher** explains how humans can see everything from auburn to aquamarine.

**WATCH THE TED TALK AT:**

[ted.com/talks/colm\\_kelleher\\_how\\_we\\_see\\_color](https://www.ted.com/talks/colm_kelleher_how_we_see_color)

## Think about it

1. Discuss the concept of “physical color” and how it does not tell the whole story.

---

---

---

---

2. Kelleher states that “because light is a wave, two different frequencies shouldn’t interact with each other at all.” Expound on why that should not happen and what is occurring that is allowing it to happen.

---

---

---

---

3. Explain the function of the Retina in seeing color.

---

---

---

4. There is only one of these light-detecting cells; what is it called? What does it allow us to see?

---

---

---

**5.** Describe how your eye is able to see yellow. Explain in detail the process that occurs.

---

---

---

---

**6.** Compare and contrast what happens in your eye and brain when you see blue verses purple.

---

---

---

**7.** Explain what prevents us from seeing colors in the dark?

---

---

---

---

---

**8.** Identify the two signals your brain receives in the dark?

---

---

---

**9.** Explore the benefits of only having three color-detecting cells. How does that impact the real world?

---

---

---

---

**10.** Hypothesize what happens when someone is color blind. How do you think their ability to see colors is impacted?

---

---

---

---

## Do it

- Pay attention to how many things in your daily life are not just red, green or blue.
- Experiment to see how much light you need to have in order to see color.
- Interview someone who knows they are color blind and explore the differences each of you see in an image.
- Learn more about color with the Mensa for Kids Introduction to Color lesson plan at [bit.ly/intro-to-color](https://bit.ly/intro-to-color).

## Read about it

- Learn more about how we see color at [bit.ly/how-we-see-color](https://bit.ly/how-we-see-color).
- Learn about hue, value, and saturation – the three main integral parts of color – at [bit.ly/three-parts-of-color](https://bit.ly/three-parts-of-color).
- Learn more about the science of color at [bit.ly/smithsonian-libraries](https://bit.ly/smithsonian-libraries).
- Read about the different properties of color at [bit.ly/britannica-color](https://bit.ly/britannica-color).

## Watch it

- Watch Colm Kelleher's Ted Talk on the physics behind color at [bit.ly/what-is-color](https://bit.ly/what-is-color).
- Listen to Colm Kelleher's Ted Talk that explores the question of whether light is exclusively a wave or just a particle at [bit.ly/what-is-a-light](https://bit.ly/what-is-a-light).
